INTRODUCTION

Studies that we want to do is the use of detergent into the plaster work. For knowledge, during training in an industrial contractor. This method has been used at project site.

However this method has not been proven in studies. It is important to study whether this material really added to facilitate well save time and cost.

PRODUCT DESCRIPTION

Plastering work is a process to make brick walls smooth. The plaster that stick to the wall is strong, it shall scratch with claw plaster. There are three main groups of plaster: lime plaster, Portland gypsum plaster. The combinations usually are used.
