**ICIAL POTENTIAL**

The enzymes not only chase away the insects but also added to the drinking water in the farms. The pond and duckweeds grow and flourish due to the waste are flushed into this pond and duckweeds are present. Enzymes are also added to the drink the duckweeds in the pond. Kitchen or garbage waste are good fertilizers for the soil. Even sandy land can be made fertile! After 4 months, the plants on this piece of land are at a suitable height. Animal waste is carefully packed away.

Now we get abundant crops of organic fruits with

Usage
Enzyme for fertilizer
Enzyme for insecticide
Enzyme for pesticide
For anti odour / air freshener
As plant hormones to get more flowers and fruits

## PRODUCT DESCRIPTION

An example: Add 300g of sugar + 900g of fruit skins + 3000g of water in a 5L bottle and cap tightly. Keep in a cool dry place at room temperature. Release the gas by opening the cap. Make sure it is re-capped tightly each time after the gas release. If necessary, sometimes there is a white layer on the surface. If worms appear in your enzyme solution, don't panic. Add in a little more water. They will disappear overnight.

These bottles contain kitchen waste with sugar and water. Ferment for 2-3 weeks. Then after filtration and removal of the residue, garbage enzyme can be used for a new batch of production by adding fresh garbage. The residue can be ground as a fertilizer.

it also reduces foul odours and infections in their food digestion. Enzymes are used when animal waste are flushed into this water, a rich nutrients present. The animal grow and flourish due to the rich nutrient water in the farms. A closer view of animal waste when added with enzymes make it converted into a piece of useful farm land. Sandy land have grown to a considerable amount to be used as organic fertilizers.

the use of enzymes!

- Garbage enzyme has many uses for the environment:
- to reduce the usage of chemical fertilizers
  - to keep the farm free from insects and infections
  - as a soil fertilizer for vegetable growing
  - as a natural pesticide and herbicide
  - to convert sandy land to fertile farm land
  - keep the air cool and clean in the farm atmosphere
  - clean the dirty and impure water in the farm

In homes, garbage enzyme is used:

	Dilute with water
as a household cleaning liquid	1:100 or 1:500
- to remove foul odours, molds and grime in the kitchen	1:100 or 1:500
- as an anti-bacterial and anti-viral agent	1:10
- to drive away insects	1:1
- to clean carpets and remove ticks	1:2
- for laundry washing and ironing	1:5
- for mopping floors	
- for cleaning cars	

When the enzyme is diluted with water, it becomes more effective.

the use of enzyme

of water and mix well in a 5000cc plastic bottle and use the gases formed once a day for the first month. For the 2nd and 3rd months, only release any gases of the enzyme solution during fermentation. Should handful of sugar, mix well and cap the bottle tightly.

mentation will take place in the bottles for 3 months. residue is obtained. The residue can be used again for a second time. It can also be dried, then blended and buried in the soil.

ironment, agriculture and even in homes.
