BTST THIN FILM SENSOR APPLICATION: HEAT INDICATOR

by

NUR FAIZAH BINTI JAAFAR

Report submitted in partial fulfillment
of the requirements for the degree
of Bachelor of Engineering

MARCH 2007

ACKNOWLEDGEMENTS

Firstly, I would like to take this opportunity to thanks Prof. Madya Dr. Johari Adnan for giving me a chance to do my Final Year Project and also for being a great and tolerant Supervisor. I have learnt a lot of from him especially in aspect of proficiency and commitment. I also gain knowledge about of the fabrication process even though I am not a major in this field and learn a lot of electronic instrumentations including hardware and software. Beside that, I would like to thanks him for supplying the electronics component needed for this project.

Secondly, I would like to express my appreciation and gratitude to Ms Nor Hayati Sabani, Assistant Researcher, for helping me in fabrication sensor's sample and also teaching me how it's produced.

Last but not least; I would like to thanks to all my friends, for their helps in troubleshooting, testing method and advice.

THANK YOU...

Yours truly,

(Nur Faizah Binti Jaafar)

Bachelor of Electronic Engineering,
Universiti Malaysia Perlis(UniMAP)

APPROVAL AND DECLARATION SHEET

This project report titled BTST THIN FILM SENSOR APPLICATION: HEAT INDICATOR was prepared and submitted by Nur Faizah Binti Jaafar (Matrix Number: 031030384) and has been found satisfactory in terms of scope, quality and presentation as partial fulfillment of the requirement for the Bachelor of Engineering (Electronics Engineering) in Universiti Malaysia Perlis(UniMAP).

Checked and Approved by

(PROF. MADYA DR. JOHARI ADNAN)
Project Supervisor

APLIKASI PENGESAN FILEM TIPIS BTST: ALAT PENUNJUK HABA

ABSTRAK

Laporan ini adalah hasil projek tahun akhir yang dijalankan sepanjang tahun empat untuk Ijazah Sarjana Muda bagi Kejuruteraan Elektronik di Universiti Malaysia Perlis. Kertas laporan ini adalah berdasarkan merekabentuk alat serta analisa mengenai alat penunjuk haba yang menggunakan pengesan filem tipis Barium Tantalum Strontium Titanate (BTST) di mana ia difabrikasikan di Makmal Bilik Bersih di Universiti Malaysia Perlis oleh sekumpulan penyelidik dari Universiti Malaysia Perlis. Projek ini bertujuan untuk melihat potensi pengesan itu sendiri. Secara keseluruhannya, projek ini terbahagi kepada dua bahagian iaitu bahagian perisian dan juga perkakasan. Selain itu, projek ini melibatkan tiga litar iaitu litar transduser, litar untuk penukaran isyarat analog ke isyarat digital, dan untuk isyarat aplikasi ialah litar kawalan mikro menggunakan litar terkamir PIC kawalan mikro . Maka, dengan itu untuk membuktikan litar berfungsi dengan sempurna, simulasi daripada isyarat aplikasi keluaran dari litar kawalan mikro perlu ditunjukkan. Secara asasnya, apabila haba dikenakan kepada litar transduser yang mengandungi pengesan filem tipis BTST, pengesan tersebut akan mengesan perubahan haba dan akan menukar isyarat yang diperolehi kepada elemen elektrik seperti rintangan. Kemudian, litar penyesuai akan memberi isyarat kepada litar kawalan mikro untuk memproses isyarat yang dihantar. Kemudian disalurkan kepada barisan penanda LED untuk menunjukkan sama ada persekitaran panas ataupun tidak.

BTST THIN FILM SENSOR APPLICATION: HEAT INDICATOR

ABSTRACT

This report contains an account of my final year project, which was carried out in the forth year of the Electronic Engineering (B.Eng) degree at Universiti Malaysia Perlis. This paper is based on the design and analysis of heat indicator using Barium Tantalum Strontium Titanate (BTST) thin film sensor which was fabricated in Universiti Malaysia Perlis (UniMAP) Cleanroom by their researchers. This project was done to see the potential of the sensor itself. This project is divided into two parts namely software and hardware development. Also, it includes two circuits that need to be designed and developed, specifically analogue and digital part. Hence, to prove the circuit works, the simulation of the output need to be shown. This heat indicator consists of BTST thin film sensor and also PIC controller for data acquisition and conversion. When heat is applied to the sensor, the sensor will detect the heat by electrical characteristic which is the resistance that produced by sensor. The signal conditioning circuit and the microcontroller will indicate whether it's hot or not by how many LEDs light up.

ABSTRAK	iii
ABSTRACT	iv
TABLE OF CONTENTS	v
LIST OF TABLES	vii
LIST OF FIGURES	viii
LIST OF SYMBOLS, ABBREVIATIONS OR NOMENCLATURE	x
CHAPTER 1 INTRODUCTION	1
1.1 Background History	1
1.2 Objectives	2
1.3 Scope of work	3
1.4 Overview of the thesis	3
CHAPTER 2 LITERATURE REVIEW	5
2.1 FUNDAMENTAL THEORY AND EQUATION	6
2.2 TRANSDUSER AND SIGNAL CONDITIONING PART	7
2.2.1 Solution	10
2.2.2 Fabrication process	11
2.2.3 Annealing/sintering	12
2.2.4 Characterization	13
2.2.5 Metallization	14
2.2.6 Packaging	15
2.2.7 Electrical properties	16
2.3 DATA ACQUISITION AND CONVERSION	17
2.4 OUTPUT DISPLAY	19

CHAPTER 3 METHODOLOGY	21
3.1 Sensor Part	22
3.1.1 Sensor characteristic test	23
3.1.2 Designing Circuit for sensor part by using differential instrumentation amplifier and bridge circuit	24
3.2 Data acquisition, conversion and user interface part	31
3.2.1 Programming the PIC 16F876A microcontroller	31
3.2.2 Data display	32
3.3 Heat Indicator Prototype	33
CHAPTER 4 RESULTS AND DISCUSSION	34
4.1 Sensor characteristic test	34
4.2 Circuit design test	35
CHAPTER 5 CONCLUSION	39
5.1 Summary	39
5.2 Recommendation for future project	40
5.3 Commercialization potential	40

APPENDICES	
APPENDIX A	44

LIST OF TABLES

Table No.		Page
2.0	Electrical transducer parameters [6]	9
2.1	PIC 16F876 pinout description [8]	18
3.0	The equivalent resistor in circuit and equation.	25
3.1	Calculation based on theoretically value.	29
3.2	Calculation based on the exact value	30
4.0	The results from experiment for BTST sensor characteristics	35
4.1	Output voltage from sensor and instrumentation differential amplifier part	37

LIST OF FIGURES

Figure No.		Page
2.0	Flow of basic design stages	5
2.1	Flow of sensor general fabrication process	10
2.2	Solutions that are used to produce BTST thin film sensor	11
2.3	Ultrasonic machine.	11
2.4	Flow chart of deposition process	12
2.5	Annealing process	13
2.6	Atomic Force Microscopic (AFM) machine	14
2.7	Physical Vapour Deposition Module (PVM)	15
2.8	Sensor before packaging	15
2.9	Sensor after packaging	16
2.10	PIC 16F876A microcontroller board	17
2.11	PIC 16F876A microcontroller block diagram	17
2.12	LED conduction curve shows the safe operating area.	19
2.13	A typical LED circuit with a series current limiting resistor	20
3.0	Flow of the design methodology	22
3.1	Sensor characteristic testing method diagram	24
3.2	Circuit for sensor part	25

3.3	Flow of the PIC16F876A program	31
3.4	LED circuit indicator	32
3.5	Heat indicator prototype	33
4.0	BTST Sensor Characteristic, Resistance (kΩ) v. Temperature(°C)	35
4.1	The analysis of BTST sensor characteristic	36
4.2	Graph of output voltage v. temperature	38
5.1	The sensor market development for major application sectors	42

LIST OF SYMBOLS, ABBREVIATIONS OR NOMENCLATURE

Q	Thermal conduction
λ	Thermal conductivity
∇T	Gradient temperature
G	Constant for a given apparatus and depends on the geometric arrangement of the boundaries of the test sample
E	Voltage supply to the circuit
Ω	Ohm, unit of resistance
ΔR	Change in resistance
\neq	Not equal
k	kilo (10^3)
$^{\circ}\text{C}$	Degree Celcius (Unit of temperature)
ml	milliliter
AFM	Atomic Force Microscopic
CSD	Chemical Solution Deposition
DC	Direct Current
LED	Light Emitting Diode
LCD	Liquid Crystal Display
MOD	Metal Organic Decomposition
PVM	Physical Vapour Module
