Report submitted in partial fulfillment
of the requirements for the degree
of Bachelor of Engineering

APRIL 2007

ACKNOWLEDGEMENT

On the name of Allah, the Most Merciful, selawat and salam to our Prophet Muhammad S.A.W.

The author wishes to express his profound gratitude and grateful to his supervisor Assoc. Professor Dr. Syed Alwee Al Junid for all his advices, motivation and supervision in making this project accomplishment.

Secondly, the author also wishes to extend his sincere thanks to all lecturers, project coordinator, examiners and technicians of the School of Computer and Communication Engineering, Universiti Malaysia Perlis.

Lastly, appreciation is dedicated to all who help in way in making the project success.

APPROVAL AND DECLARATION SHEET

This project report attached hereto, entitled “Development of Intelligent Traffic Light” was prepared and submitted by Mior Tajul Adzam B. Selipol Bahari (Matrix Number: 031080582) and has been found satisfactory in terms of scope, quality and presentation as partial fulfillment of the requirement for the Bachelor of Engineering (Communication Engineering) in Universiti Malaysia Perlis (UniMAP).

Checked and Approved by

(Assoc. Professor Dr. Syed Alwee Al Junid)

Project Supervisor

PEMBANGUNAN LAMPU ISYARAT BIJAK

ABSTRAK

Hari ini, kebanyakan lampu isyarat di Malaysia dikawal oleh Pengawal Logik Boleh Ubah (PLC). Alat kawalan ini menjadi pilihan kerana harganya yang berpatutan dan juga arahan kawalannya yang mesra pengguna. Programnya boleh diubah mengikut keperluan sesuatu lampu isyarat. Projek ini menggunakan Pengawal Logik Boleh Ubah (PLC) sebagai pengawal dan ia direka untuk mengawal lampu isyarat 4 simpang. Ia mempunyai 3 mode operasi ; Mode Normal, Mode Kecemasan dan Mode Malam. Pada Mode Normal, operasi lampu isyarat akan di set berdasarkan kepada kajian terhadap jumlah bilangan kenderaan yang melalui jalan tersebut. Lampu isyarat akan bertukar secara automatic kepada Mode Kecemasan bilamana terdapat kenderaan kecemasan, seperti ambulance, bomba dan polis menggunakan simpang tersebut. Mode ke tiga ialah Mode Malam dimana mode ini akan beroperasi semasa jumlah kenderaan yang melalui simpang itu sedikit. Penghantar-terima IR juga digunakan untuk melaksanakan mode operasi ini.

DEVELOPMENT OF INTELLIGENT TRAFFIC LIGHT

ABSTRACT

Today, most of the traffic lights in Malaysia are controlled by Programmable Logic Control (PLC). This controller is chosen due to its low cost and user friendly programming language. The program could be modified to suit the requirement of any particular traffic lights. This project used the Programmable Logic Controller (PLC) as a controller and it was designed to control the 4-junctions of traffic light. There was 3 mode of operation; Normal mode, Emergency mode and Night mode. In Normal mode, the operation of traffic light have been setting based on the study conducted on the numbers of vehicles move on the road. The traffic light automatically changes to emergency mode operation when there have the emergency vehicle such as police, fire-brigade and ambulance use that junction. Third mode is night mode which operate during less traffic are using that junction. The IR transceivers have been used to implement this operation mode.

ABSTRAK	iii
ABSTRACT	iv
TABLE OF CONTENTS	v
LIST OF TABLE	vi
LIST OF FIGURE	vii
CHAPTER 1 INTRODUCTION	1
1.1 Background history	1
1.2 Problem Statements	2
1.2.1 The current system of traffic light	2
1.3 Aim and Objectives of Project	3
CHAPTER 2 LITERATURE REVIEW	5
2.1 Basic of Programmable Logic Controllers	5
2.1.1 The power supply	5
2.1.2 Control Processing Unit (CPU)	6
2.1.3 Memory	6
2.1.4 Output and Input Interface	6
2.2 Ladder Logic Diagram	7
2.3 Representative the Logic Circuit.	8
2.4 Programming	10
2.4.1 Latching	10
2.4.2 Timer	11
2.4.3 Counters	12
2.4.4 Jumps	13

2.4.5	Keep	14
2.5	CPM2A Communication Function	14
2.5.1	Link Communications	15
2.5.2	No-Protocol Communication (RS232 Communication)	16
2.5.3	NT Link Communication	17
2.5.4	One-to-one Link Communication	17
2.6	I/O Allocation for CPM2A 20CDR	18
2.7	Expansion I/O	18
2.8	IR Transceiver Circuit	19
CHAPTER 3 METHODOLOGY		21
3.1	Introduction	21
3.2	Primary Study	21
3.2.1	The problems of typical traffic light and the solutions	21
3.2.2	The operation of the traffic light	23
3.3	Software Simulation	25
3.4	Connection and Interfacing	29
3.4.1	Power supply connection	29
3.4.2	Input Terminal Connection	30
3.4.3	Output Terminal	31
3.4.4	External Power Supply Terminals	32
3.4.5	CPM2A Communication Function	32
3.5	Circuit Design	34
3.5.1	IR (infrared) Transceiver Circuit	34
3.5.2	LED external circuit	35
3.6	Prototype Design	39
3.7	Testing	41
CHAPTER 4 RESULT AND DISCUSSION		43
4.1	The Cycle Flow for the Normal Mode Traffic Light Control	43
4.2	Night Mode Traffic Light Operation	45
4.3	Emergency Mode Operation	46

4.4	Using LED External Circuit better then Expansion I/O	47
CHAPTER 5 CONCLUSION		48
5.1	Summary	48
5.2	Recommendation	49
5.2.1	Commercialization Potential	50
