THE Oil, Gas & Mining Technical Division hosted a visit to Selinsing Gold Mine on 22 June, 2013. The participants arrived at the administrative area at 11 a.m. and were given a safety induction briefing.

Its Vice President, Encik Zaidi Harun, gave us a presentation and technical introduction to the operations and answered our questions. We were informed that the site processed 3000 tonnes of feed per year, producing around 55,000 ounces of gold. The site employs around 260 employees, of which 30 are professional engineers.

Refining plant

Our group was then brought to Pit 1, an active mining pit, as well as the processing plant and offices. We were accompanied by a senior metallurgist En. Masrul and En. Rafie. After the tour, we were treated to lunch by the company. We then presented the company representatives with a token of appreciation. ■
