A thesis submitted in fulfillment of the requirements for the degree of Master of Science (Mechatronic Engineering)

School of Mechatronic Engineering
UNIVERSITI MALAYSIA PERLIS

2011

UNIVERSITI MALAYSIA PERLIS

DECLARATION OF THESIS

Author's full name : **R. PRENESH KRISHNAN**

Date of birth : **13.12.1983**

Title : **STRUCTURAL DAMAGE DETECTION IN STEEL PLATES USING ARTIFICIAL NEURAL NETWORKS**

Academic Session : **2010 - 2011**

I hereby declare that the thesis becomes the property of Universiti Malaysia Perlis (UniMAP) and to be placed at the library of UniMAP. This thesis is classified as :

☐ **CONFIDENTIAL** (Contains confidential information under the Official Secret Act 1972)*

☐ **RESTICTED** (Contains restricted information as specified by the organization where research was done)*

☐ **OPEN ACCESS** I agree that my thesis is to be made immediately available as hardcopy or on-line open access (full text)

I, the author, give permission to the UniMAP to reproduce this thesis in whole or in part for the purpose of research or academic exchange only (except during a period of _____ years, if so requested above).

NOTES : * If the thesis is CONFIDENTIAL or RESTRICTED, please attach with the letter from the organization with period andreasons for confidentially or restriction.

ACKNOWLEDGEMENT

I would like to extend my sincere gratitude to the Vice Chancellor of UniMAP, **Brigedier Jeneral Dato' Prof. Dr. Khamarudin b. Hussin** for his constant encouragement throughout my study.

I extend my wholehearted thankfulness to **Prof. Dr. Sazali Bin Yaacob**, Deputy Vice Chancellor, UniMAP for his unconditional support and motivation right through my research work and who has also co-supervised my research work.

I also wish to extend my honest appreciation to highly respected dignified, **Prof. Dr. Nagarajan**, Mechatronic Engineering Programme, School of Mechatronic Engineering, UniMAP for his constant inspiration all the way through my research work.

I would like to express my profound gratefulness to **Prof. Madya. Dr. Abdul Hamid Adom**, Dean, School of Mechatronic Engineering, UniMAP for providing support and encouragement throughout my research work.

I am very fortunate to have a kindhearted person to guide me throughout my research and would like to show my heartfelt sincere gratitude to my beloved mentor, and first Supervisor **Prof. Madya. Dr. Paulraj Murugesa Pandiyan**, Mechatronic Engineering Programme, School of Mechatronic Engineering, UniMAP for his invaluable guidance, support, and enthusiasm. I am greatly indebted for his inspiration and thirst for knowledge and research which helped me to groom and nurture myself throughout my research work. His continuous motivation helped me to complete my research successfully.

I wish to extend my deep gratitude to **Mr. Mohd Shukry Bin Abdul Majid**, Lecturer, Mechatronic Engineering Programme, School of Mechatronic Engineering,

UniMAP for his valuable guidance and funding support during my research work and also co-supervised my research work.

I extend my sincere gratitude to **Ms. Marhainis Othman**, Lecturer, Mechatronic Engineering Programme, School of Mechatronic Engineering, UniMAP, for her funding support and timely help during my research work.

I wish to express my appreciation to **Dr. Cheng Ee Meng**, Senior Lecturer, Biomedical Electronic Engineering Programme, School of Mechatronic Engineering, UniMAP, for his kind help during my research work.

I would like to thank, the members of staff, School of Mechatronic Engineering, Research and Development, Library, ICT, Bendahari and Postgraduate studies for their kind and needful assistance, encouragement and support during my research work.

I would like to express my deep appreciation to all my fellow friends and members of the Acoustic Applications Research Cluster and the members of the Research Laboratory and other research clusters for their endless support and motivation.

I wish to extend my earnest and sincere appreciation to my uncle **Prof. Dr. T. Manigandan**, Dean, School of Electrical Sciences, Kongu Engineering College, Perundurai, India, for his constant support and motivation during my research work. I would like to extend my earnest gratitude to my beloved parents, brother, relatives and friends for their constant encouragement during the course of my research work.

Finally I would like to express my deep gratitude to the Ministry of Science, Technology and Innovation (MOSTI) and the Government of Malaysia for providing me an opportunity to accomplish my research and studies.

2.4.2 Wavelet analysis 12

2.4.3 Neural network modeling 13

2.4.4 Fuzzy modeling 14

2.5 Other relevant damage detection methods 15

2.6 Damage detection methodology 16

2.7 Summary 17

CHAPTER 3 EXPERIMENTAL DESIGN AND DATA COLLECTION

3.1 Introduction 18

3.2 Modal analysis 18

3.3 Damage detection using experimental modal analysis 19

3.4 Experimental arrangement 19

3.4.1 Suspension methods 20

3.4.2 Simply supported steel plate 22

3.4.3 Fixed (Hinged) free steel plate 22

3.4.4 Selection of force and vibration transducers 24

3.4.5 Data acquisition system 24

3.4.6 Roving hammer test 26

3.4.7 Roving accelerometer test 27

3.5 Data capturing arrangement and data collection procedure 30

3.5.1 Selection of sampling frequency and bandwidth 30

3.5.2 Simulated damages 31

3.5.3 Protocol design for data collection 31

3.5.4 Data collection procedure 38

3.5.5 Vibration signal database 40

3.6 Summary 42

CHAPTER 4 FEATURE EXTRACTION AND DATA PROCESSING

4.1 Introduction 43

4.2 Vibration signal preconditioning 43

4.3 Feature extraction 45

4.4 Feature extraction: frame energy method 45

4.4.1 Signal trimming algorithm 47

4.4.2 Calculation of frame energy based features 51

4.4.3 Algorithm for extraction of frame energy based features 53

4.5 Feature extraction: DCT peak moment method 56

4.5.1 Discrete cosine transformation 56

4.5.2 DCT peak magnitude 57

4.5.3 Extraction of DCT peak moment features 60

4.6 Feature extraction: change in DCT peak moment method 62

4.6.1 Calculation of change in DCT peak moment 62

4.6.2 Algorithm to extract the change in DCT peak moment features 62

4.7 Feature extraction: DCT peak value derivative method 64

4.7.1 Calculation of DCT peak value derivatives 66

4.7.2 Algorithm to extract DCT peak value derivative features 67

4.8 Feature extraction: DCT peak area method 68

4.8.1 Calculation of DCT peak area coefficients 69

4.8.2 Extraction of DCT peak area coefficients 70

4.9 Feature extraction: spectral band method 73

4.9.1 Estimation of spectral bands using DFT coefficients 73

4.9.2 Algorithm to extract of DFT Spectral band features 75

4.10 Data preprocessing 78

4.10.1 Outlier identification and removal 78

4.10.2 Data normalization and randomization 80

4.10.3 Output labeling 81

4.10.4 Feature reduction / dimensionality reduction 81

4.11 Summary 84

CHAPTER 5 STEEL PLATES DAMAGE DETECTION USING FEEDFORWARD NEURAL NETWORKS

5.1 Introduction 85

5.2 Synopsis of artificial neural network 85

5.3 Motivations for the choice of ANN for steel plate damage detection 86

5.4 Neural network training and testing 87

5.4.1 Falhman testing method 87

5.5 Architecture and design of multilayer feedforward neural network 88

5.6 Training multilayer feedforward neural network 89

5.6.1 Levenberg marquardt training algorithm 89

5.6.2 Choosing neural network parameters 90

5.6.3 MLP neural network training 91

5.7 MLP network modeling 92

5.8 MLP training results 92

5.8.1 Comparison of architectures for MLP models 99

5.8.2 Comparison of mean classification accuracy for MLP models 101

5.8.3 Comparison of mean sensitivity for MLP models 104

5.8.4 Comparison of mean specificity for MLP models 107

5.8.5 Comparison of mean number of epoches for MLP models 110

© This item is protected by original copyright

5.9 Architecture and design of radial basis function neural network 112

5.9.1 Choice of basis function and spread factor 113

5.10 Training radial basis function network 114

5.10.1 RBF network training 114

5.11 RBF network modeling 115

5.12 RBF training results 116

5.12.1 Comparison of architecture for RBF models 123

5.12.2 Comparison of mean classification accuracy for RBF models 124

5.12.3 Comparison of mean sensitivity for RBF models 127

5.12.4 Comparison of mean specificity for RBF models 130

5.12.5 Comparison of number of kernels for RBF models 133

5.13 MATLAB graphical user interface for damage detection 135

5.14 Summary 137

CHAPTER 6 RESULTS DISCUSSION AND CONCLUSION

6.1 Introduction 138

6.2 Discussion 138

6.3 Thesis conclusion 143

6.4 Future work 144

D.18 Frequency spectrum at location 14 for channel 3 with maximum damage (Fixed free steel plate) 172

E.1 MLP Mean squared error versus epoch graph for frame energy based feature classification (simply supported) 173

E.2 MLP Mean squared error versus epoch graph for frame energy based feature classification (fixed free) 174

E.3 MLP Mean squared error versus epoch graph for DCT peak moment feature classification (simply supported) 176

E.4 MLP Mean squared error versus epoch graph for DCT peak moment feature classification (fixed free) 177

E.5 MLP Mean squared error versus epoch graph for change in DCT peak moment feature classification (simply supported) 179

E.6 MLP Mean squared error versus epoch graph for change in DCT peak moment feature classification (fixed free) 180

E.7 MLP Mean squared error versus epoch graph for DCT peak value derivative feature classification (simply supported) 182

E.8 MLP Mean squared error versus epoch graph for DCT peak value derivative feature classification (fixed free) 183

E.9 MLP Mean squared error versus epoch graph for DCT peak area feature classification (simply supported) 185

E.10 MLP Mean squared error versus epoch graph for DCT peak area feature classification (fixed free) 186

E.11 MLP Mean squared error versus epoch graph for DFT spectral band feature classification (simply supported) 188

E.12 MLP Mean squared error versus epoch graph for DFT spectral band feature classification (fixed free) 189

F.1 RBFN performance characteristic graph for frame energy based feature classification (simply supported) 191

F.2 RBFN performance characteristic graph for frame energy based feature classification (fixed free) 192

F.3 RBFN performance characteristic graph for DCT peak moment feature classification (simply supported) 194

F.4 RBFN performance characteristic graph for DCT peak moment feature classification (fixed free) 195

© This item is protected by original copyright

F.5 RBFN performance characteristic graph for change in DCT peak moment feature classification (simply supported) 197

F.6 RBFN performance characteristic graph for change in DCT peak moment feature classification (fixed free) 198

F.7 RBFN performance characteristic graph for DCT peak value derivative feature classification (simply supported) 200

F.8 RBFN performance characteristic graph for DCT peak value derivative feature classification (fixed free) 201

F.9 RBFN performance characteristic graph for DCT peak area feature classification (simply supported) 203

F.10 RBFN performance characteristic graph for DCT peak area feature classification (fixed free) 204

F.11 RBFN performance characteristic graph for DFT spectral band feature classification (simply supported) 205

F.12 RBFN performance characteristic graph for DFT spectral band feature classification (fixed free) 206
