

# Petronas Awards Contract for LNG Train 9 Project

PETRONAS has awarded the contract for the Front End Engineering Design (FEED) for a new production train project at its PETRONAS LNG Complex in Bintulu, Sarawak, to JGC Corporation and to a partnership of Chiyoda Corporation and Saipem S.p.A. The contract, awarded under a dual FEED scheme, will see the two contractors compete in the FEED and in the Engineering, Procurement and Construction (EPC) price proposal for the project, known as PETRONAS LNG Train 9. The FEED is scheduled to be completed in December 2012, where the winner will be awarded the project's Engineering, Procurement, Construction and Commissioning (EPCC) contract. The new LNG train will add another 3.6 million tonnes per annum (mtpa) to the existing 24 mtpa production capacity of the PETRONAS LNG Complex and utilise the same liquefaction process technology as the complexes' existing eight trains.
