NOVELTY AND COMMERCIAL ADD BLASTER WORKS
INTRODUCTION

Studies that we want to do is the use of detergent into the plaster work. For knowledge, during training in an industrial contractor. This method has been used on site.

However this method has not been proven in studies. However, it is important to study whether this method really added to facilitate work well save time and cost.

PRODUCT DESCRIPTION

Plastering work is a process to make brick walls to make its smooth surface. It is better to the brick wall than the wall priming. Water stick to the wall is strong, it will not scratch with clay plaster. There are three main groups of plaster. Lime plaster, Portland cement plaster and gypsum plaster. The combination usually are used.
to add material about mortar to facilitate the this idea was obtained I construction company been practiced at the is not been disclosed to e its effectiveness has owever, we think it is e use made of this ma-work and plaster as done to clean up the n. This should be done face. So that the plas-binding and surface ring work done before. of materials used its cement plaster and tion of these materials
