INTRODUCTION
Common soap bars are a 19th century invention, but the concept of using soap dates back at least 5000 years. Some snapshots of soap in our lives make for a fascinating story.

Archaeological evidence of soap was found in clay containers dated at 2800 B.C. These containers state that the product was made from ashes. The product thus produced could have been used to wash the body; it might have been used in textile manufacture. The Egyptians, for example, used soap for medicinal purposes. They believed that washing with soap could help to treat skin conditions, such as sores as well as washing. Some sources suggest that both animal and vegetable fats were used with alkaline salts to make a substance that could break down oils and fatty substances.

**PRODUCT DESCRIPTION**
